

VENKATADRI MALLE

AI Engineer | Gen AI Engineer | Python Fullstack Developer

Hyderabad, India | +91 7989332496 | mallevenkatadri892@gmail.com | linkedin.com/in/MalleVenkatadri

EDUCATION

B.Tech in Electronics & Communication Engineering | K.S.R.M College of Engineering, KADAPA |

Sep 2021 – May 2025 | CGPA: 8.49

AI & Gen AI Intern | Talent Smart Soft Solutions | May 2026 – Nov 2026 (Ongoing)

- Building and integrating Large Language Models (LLMs) through hands-on API integration, prompt engineering, and conversation design for real-time applications.
- Developing RAG pipelines using vector databases and embedding models; working on transformer-based models for NLP tasks like summarization and classification.
- Contributing to live production GenAI projects using Python, Django, and FastAPI in an agile team environment.

TECHNICAL SKILLS

AI / Gen AI: LLM APIs (Claude, Gemini, OpenAI), LangChain, Prompt Engineering, RAG, Transformers

ML / DL: Hands-on with supervised & unsupervised learning, neural networks, and computer vision using Scikit-learn, TensorFlow, Keras, OpenCV

Python Fullstack: Python, Django, FastAPI, HTML, CSS, REST APIs

Database: MySQL

Cloud & Tools: AWS, Git, Jupyter Notebook, VS Code, Vibe Coding, Antigravity, Gemini

PROJECTS

Face Recognition Attendance System | Deep Learning | FastAPI | MySQL | OpenCV | ONNX

- Developed a real-time face recognition attendance system using deep learning models for face detection and recognition via ONNX runtime and OpenCV.
- Built a FastAPI backend for face enrollment, live recognition, and automatic attendance logging into MySQL; automated model download pipeline for easy deployment.

LLM Health Analysis System | Python | LangChain | Gemini | Streamlit

- Built an AI health assistant using Gemini LLM and LangChain to analyze user-described symptoms and generate context-aware health insights with conversation memory.
- Designed an interactive Streamlit dashboard for real-time health data input with safe-response guardrails and multi-turn consultation support.

Personal Startup — Service Information Portal | Python | Django | HTML | CSS

- Designed and built a fully functional static service-based information portal using Django with responsive HTML and CSS frontend covering services, about, and contact sections.
- Configured Django URL routing, views, and templates for efficient content delivery with a clean, maintainable project structure.

Machine Learning & Deep Learning Projects | Python | Scikit-learn | TensorFlow | Keras | Jupyter Notebook

- Worked hands-on with ML and DL models covering supervised learning for classification and regression tasks, and unsupervised learning for clustering and pattern recognition.
- Built and trained neural network models for image and text data; managed complete workflows in Jupyter Notebook from data preprocessing through model evaluation and result visualization.
