PROFILE SUMMARY

Motivated Data Science fresher with strong expertise in **Python**, **Machine Learning**, **Deep Learning**, and **Generative AI**. Proficient in **SQL** for data operations and **Power BI** for creating actionable insights through dashboards. Passionate about solving complex data problems and eager to leverage analytical skills to drive business value in a collaborative environment.

EDUCATION

Raghu Engineering College, *B.Tech: Computer Science (Data Science)*
CGPA: 8.30

11/2021 – 05/2025

TECHNOLOGIES

Languages

Python, SQL

FrameWorks/Libraries

Pandas, NumPy, OpenCv, Scikit-learn, PyTorch, LangChain

Tools/Platform

Power BI, N8N

Technologies & Domains

Generative AI, Machine Learning, Deep Learning, Data Analysis, Data Visualization

INTERNSHIP

Data Science Intern, Innomatics Research Labs

09/2025 – Present | Hyderabad

- Developed proficiency in end-to-end data science workflows including **data cleaning**, **exploratory data analysis (EDA)**, and **feature engineering** using Python, Pandas, and NumPy.
- Built and evaluated **Machine Learning models** (classification, regression) using Scikit-learn, optimizing performance through hyperparameter tuning and cross-validation techniques.
- Gained hands-on experience with **Deep Learning frameworks** (TensorFlow/PyTorch) for neural network development and model training on structured and unstructured data.
- Created interactive **Power BI dashboards** and **SQL queries** to extract, transform, and visualize data insights, and explored **Generative AI** applications using LangChain for LLM-based solutions.

PROFESSIONAL PROJECT EXPERIENCE

Automated Portfolio Builder Using LangChain & n8n

- Developed an end-to-end AI application that converts resumes into personalized portfolio websites automatically.
- Implemented resume parsing for PDF and DOCX files using PyPDF2 and python-docx.
- Designed a multi-stage LLM pipeline for resume understanding and frontend code generation.
- Generated production-ready HTML, CSS, and JavaScript with no manual intervention.

Automated PPT Generation System using Streamlit & n8n

- Built an AI-powered automation system using Streamlit and n8n to generate complete PowerPoint presentations from user prompts.
- Automated LLM processing, slide creation, and file delivery, reducing manual PPT creation time by **90%** and generating presentations in under **15 seconds**.
- Demonstrated expertise in automation engineering, scalable workflow design, and building efficient, user-centric AI applications.

Database Management Project - Grocery Store Management (SQL), Github 🌐

- Designed and implemented a relational database for grocery store operations, managing products, customers, orders, and inventory with high data integrity.
- Developed optimized SQL queries using joins, constraints, aggregate functions, and subqueries for sales reporting, inventory tracking, and efficient data retrieval.
- Created analytical queries to identify best-selling products, customer purchase patterns, and stock shortages, improving inventory management efficiency by **30%**.

Global Retail Sales Dashboard, (Power BI), Github 🌐

- Designed and developed an interactive Power BI dashboard to analyze global sales, returns, and profitability for data-driven decision-making.
- Modeled retail datasets to track key KPIs such as Revenue, Profit Margin, and Year-over-Year (YoY) Growth.
- Generated actionable insights to identify top-performing regions, optimize sales strategies, and reduce return rates by **20%**, improving overall profitability.

ACHIEVEMENTS

Participated in an internal hackfest

Participated in an internal Hackfest, presenting an innovative solution to address challenges faced by windmills in electricity production.
